

FEATURES AND BENEFITS

- Superior knot holding capabilities
- Single tape construction, increasing strength and run-ability in HD balers
- Heavy fibrillation, giving softer properties reducing wear on baler
- Withstand higher pressure/density allowing more fodder in the bale
- More metres per pack resulting in extra bales pressed daily
- Less reloading per day, giving more time baling
- Designed for Australian conditions with 12 month guarantee against UV degradation

GREAT WHITE XD

Great White XD is a specialized twine for high density large square baling and was specifically designed for the higher pressure applied in the new HD Balers. Great White XD has been verified by the leading baler manufacturers, such as Massey Ferguson, Claas & Krone for use in all of the current model HD balers. Its single tape, heavily fibrillated construction, guarantees a less abrasive run through the baler, while maintaining superior knot holding properties.

USAGE AND APPLICATION

Designed to withstand the higher pressures applied in HD balers, Great White XD significantly lowers fodder conservation costs from 'Paddock to Stock'. With Great White XD's superior knot holding properties to maximise bale weight and compression, combined with additional metres per spool, Great White XD is a perfect choice for use in all HD balers and crop types.
